

ALERT STATEMENT

HOUSEHOLD ITEMS:

- ◆ Comforters / Bedspreads – Will be cleaned according to care instructions. Any pre-existing stains on comforters may cause a color loss after cleaning. If the bedding is part of a set, we recommend all pieces going through cleaning together because each piece may clean differently, i.e. color fading.
- ◆ Cushion Covers – Will be cleaned according to care instructions. Some material is not pre-shrunk, therefore there is no guarantee that there will be no shrinkage after cleaning. There is also the possibility of color loss due to pre-existing stains and/or sunlight damage.
- ◆ Draperies – Will be cleaned according to care instructions. Sunlight damage to drapes may result in color changes and shredding of material during cleaning.

WEDDING GOWNS / FANCY GOWNS:

- ◆ All gowns are cleaned according to care instructions.
- ◆ Any heavily soiled areas and pre-existing stains may not be removed entirely. Gowns are usually delicate items and only so much can be done without damaging the fabric.
- ◆ Any beaded garments may lose their beads IF the beads are glued on. Today's gowns rarely have the beads glued anymore, however there is always the possibility.

LEATHER & SUEDE GARMENTS

- ◆ Most importantly, all leather & suede garments are made from animal skins. Each skin holds color differently. If a garment is made with various skins, there is the possibility that some of the color may run or fade, leaving the garment with an inconsistent color. Also, animal skins may shrink depending on how well they were treated before being made into the garment. We are not responsible for these problems or any of the other problems listed on the separate sheet.

I have read and understand the above alert statement. I understand that Clean Enterprises will clean the submitted garment only by the care label. If there is no care label Clean Enterprises will clean the garment according to the normal standard for the garment's specific material. I hereby release Clean Enterprises from any damage that may occur during normal cleaning.
